MTP Adapter Plates

LC Adapter Plates

Spiral Wrap Tubes

Note: LC and MTP adapter plates must be loaded with LC and MTP cables before insertion into the enclosure. LC and MTP adapter plates can only be inserted and removed from the back of the enclosure.

Use supplied wrap tubing sections to bundle cable in a uniform bundle to allow for proper tray movement. Secure bundles to LightStack cable managers per instruction for the enclosure.

Note: LC BladePatch® cords must be used when loading the rear of LC plate.

Cable exit can easily be opened to accept cable by depressing side opposite desired loading side.
