Snap grommets into knockouts of intended cable entry locations.

Remove knockouts before mounting enclosure to wall.

Note: It is recommended to remove as many knockouts as you might require in the future.

Select proper location for enclosure between 86mm (16 in.) on center (O.C.) studs. Determine height of enclosure and mark studs 4 times for screw placement.

Remove enclosure and insert #6 x 1 in. wood screws (not provided). Leave approximately 1/8 in. of the screw sticking out.

Torque all four screws down while holding a screwdriver in appropriate sheetrock slot. Slots are used to hold the enclosure at the proper depth for mounting and placement of cover.

Slot 1: 1/2” Sheetrock
Slot 2: 5/8” Sheetrock
Slot 3: 3/4” Sheetrock

For Surface Mounting Go to Step # 7
Lance tabs have been provided for easy cable management.

For surface mounting, locate holes as shown and secure to wall using appropriate screws.

Note: 20” & 36” enclosures have cut-out in center rail for access to mounting screw.

Route cables through knockouts into enclosure. It is recommended to separate all cables prior to entering enclosure.

Lance tabs have been provided for easy cable management.

For cable protection it is recommended that all cables be coiled within the enclosure prior to termination.

To assist safe installations, comply with the following:
A. Use caution when installing or modifying telecommunications circuits.
B. Never touch uninsulated wire terminals unless the circuit has been disconnected.
C. Never install this device in a wet location.
D. Never install wiring during a lightning storm.
