

Z-MAX® 6A SHIELDED OUTLETS

The shielded Z-MAX outlet offers best-in-class performance in every critical specification, exceeding all Category 6A performance requirements, including alien crosstalk. Its innovative features not only speed and simplify termination, but remove installation variability for consistently high and repeatable performance — every termination, every time!

Compact — Slim and side-stackable for high-density applications. Supports “pass-thru” feature to mount from the front or rear of a faceplate

Fastest Termination Time — Zero-Cross™ termination module and Z-TOOL™ termination process combine for best-in-class termination time

Color Coding Capability — Bezel allows outlets to be color-coded for customer identification to match faceplates and other mounting accessories

High-Visibility Icon System — Printed icons allow designation for voice / data applications and also provide an additional color coding option

Guided Termination Features — Linear lacing channels guide correct conductor placement while 2-sided color-coding provides wiring verification before and after lacing

Robust Hinged Cable Retention — Clip accommodates multiple cable diameters

Compliant — Is compliant with UL2043 and is appropriate for use in air handling spaces

Flexibility and Simplified Ordering

A single hybrid outlet supports both angled and flat mounting orientations.

Enhanced Shielding Effectiveness

High level of shielded effectiveness exceeds ISO 360 degree shielding requirements via die cast housing and hinged cable retention/grounding clip.

100% Jack-to-Jack Plastic Isolation

Plastic bezels prevent contact between metal housings when side stacking to ensure ground quality and ANEXT performance.

Quick-Ground™ Termination

Cable shield is automatically terminated to the outlet without additional steps.

Spring Door Option

Minimizes exposure to dust and other contaminants.

Contact Integrity — Featuring Siemon's patented crowned jack contact geometry that improves electrical and mechanical performance and ensures that any jack or plug contact damage due to arcing caused by unmating under PoE load occurs well away from the final mated contact position.
