

Siemon *Success* Solution

Customer Overview The Hyatt Regency Denver

INDUSTRY
Hospitality

- Owned by the City of Denver
- Operated by the Hyatt Corporation
- 37 stories, 1,000 rooms
- Over 60,000 square feet of meeting and convention space

Challenge

The Hyatt Convention Center Hotel, one of the premier hotels in the city, is equipped with a high performance Siemon 10Gip® cabling system. Although the Hyatt was committed to providing its business traveler customers with the highest performing network available, cost pressures forced the developer to explore lower performing options

Solution

Actively engaged with the owner and developer of the project, Siemon and consultant group, Michael Raiser and Associates, were able to prove the value of the 10G ip® system and that investing in the best technology would also provide the best long-term return on investment. Siemon performed multiple walkthroughs and provided guidance throughout the entire installation. The 10G ip® copper horizontal and XGLO® fiber backbone spans 37 floors with approximately 5000 drops.

Results

This investment in a future-proof physical network infrastructure gives every guest at the Hyatt in-room access to a network capable of supporting performance as high as 10Gb/s, faster than most business travelers experience back at the office.
