Siemon launches new DataKeep™ cabinets and accessories

Siemon, a leading global network infrastructure specialist, has officially launched a new range of cabinet and accessories under the brand name DataKeep™. The new line of cabinets and accessories are designed particularly for the EMEA (Europe, Middle East and Africa) markets and are available for order now.

DataKeep™ will feature two ranges of cabinets with one targeted specifically for the data centre environment – *DataKeep™ DC* – whilst *DataKeep™ TR* cabinets provide a robust cost-effective solution for comms room environments. Both ranges of DataKeep™ cabinets combine density, accessibility and efficiency with robust construction and provide the ideal solution for housing network equipment, servers and patching fields in any data centre environment or telecommunications space. The new cabinets can be equipped with a wide range of DataKeep™ accessories and are suitable for use as a standalone cabinet or in a multi-bayed aisle configuration. Extending Siemon's WheelHouse line of advanced data centre and enterprise solutions, the new range of cabinets provide customers with improved design, greater product flexibility and improved availability. With DataKeep™, Siemon responds to the growing demands in an increasingly dynamic data centre market in the EMEA region.

DataKeep™ DC and TR cabinets are available in multiple depths, heights and in 600mm and 800mm widths with space for vertical cable management.
The new cabinets can also be ordered as preconfigured cabinets preloaded with all DataKeep™ accessories, pre-assembled and packaged to arrive on site ready for final connections and installation of any active equipment. DataKeep™ cabinets are also compatible with Siemon's aisle containment solution for improved thermal management and Siemon's robust V-Lock system, designed for added cabinet security.

Available with several door styles including split, full, vented and solid options and various lock and handle options, including 4-point locking and 3-digit combination, the new cabinets offer superior cabinet security.

DC and TR cabinets can be equipped with a wide range of DataKeep™ cabinet accessories, including shelves, vertical and horizontal cable managers, blanking and brush panels, fans,

castors, levelling feet, bases and where needed our design team can work to configure the cabinets to specific customer requirements if needed

Commenting on the broad scope of deployment options, Lee Funnell, Technical Manager ERA at Siemon says: The launch of the DataKeep™ range of cabinets is a combination of us listening to our customers and us continually innovating to address their needs. Coupled with our market leading data centre design services, these new cabinets bring a fresh new addition to the Siemon WheelHouse solution offering in EMEA and customers will certainly be impressed with the shorter lead times and competitive price points."

Cabinets are available in black, light grey or white as standard and are also available in other colours depending on customer needs.

DataKeep™ cabinets combined with Siemon connectivity, cable, PDUs offer a complete end-to-end infrastructure solution for today's advanced data centre and office environments. A select range of cabinets will be available at the Siemon EMEA HQ demo room for viewing. You are able to book an appointment by contacting era_tech@siemon.com.
