

# CERTIFIED INSTALLER PROGRAM

At Siemon we understand that achieving optimal cabling system performance goes beyond using high-quality cables and hardware. Our Siemon Cabling System Certified Installer Program ensures that structured cabling systems are designed, installed, and managed properly, enabling the full potential of bandwidth.

This program goes beyond the ANSI and ISO standards, aiming to exceed customer expectations. Siemon collaborates with dedicated communications professionals, supporting their continuous improvement in knowledge, job skills, customer service, and workmanship quality.

## Siemon Certified Installer End User Benefits Include:

- ✓ 25-year warranty on applications and products.
- ✓ Open Cabling System: Select the cable that best suits the business needs of the end user.
- ✓ Compliance with ANSI and ISO standards for design, installation, and administration of telecommunications cabling. This ensures that the end user's cabling infrastructure supports voice, data, and imaging applications.
- ✓ International Network of Certified Installers supports multi-site and multi-national end users.
- ✓ Certified Installer Training: Siemon Cabling Systems require telecommunications professionals who have completed Siemon's intensive training program. A minimum of two trained employees is necessary for a company to become a Certified Installer, ensuring compliant and advanced cabling design.
- ✓ Siemon's right to audit Certified Installer procedures and documentation, and certified installations anytime to ensure compliance with Siemon Cabling System training manual.
- ✓ 100% Link and Channel Testing: Thoroughly documented testing is kept on file for the warranty duration.
- ✓ The Siemon Cabling System is independent of active networking equipment, specializing in structured cabling without bias towards any brand of active equipment.
