

LightStack® Connectivity System

Surface Mount Fiber Enclosure

Regional Availability – Global

The Siemon LightStack® Surface Mount Fiber Enclosure houses a single LightStack MTP to LC Module or a single adapter plate – either MTP or LC. Ideal for fiber distribution in a variety of tight spaces, the LightStack Surface Mount Enclosure can be easily mounted to walls, under floors, at the desk or above the ceiling. It supports an optional splice accessory for fusion splicing and cable slack storage. The LightStack Surface Mount Fiber Enclosure enables the deployment of fiber consolidation points that simplify moves, adds and changes by significantly reducing installation time and disruption. Rather than longer home run cabling links, MTP plug and play fiber assemblies can easily connect to the enclosure and then shorter MTP or LC fiber assemblies are used to connect from the enclosure to devices.

1. Module Insertion and Removal

Can be quickly and easily installed or removed from the front or rear of the enclosure.

2. Extremely Low Profile

Measures just 179mm (7 in.) long x 119mm (4.7 in.) wide and 18mm (0.7 in.) high for easy deployment in tight spaces.

3. Easy Access

Front lid pivots up for full access to connectivity.

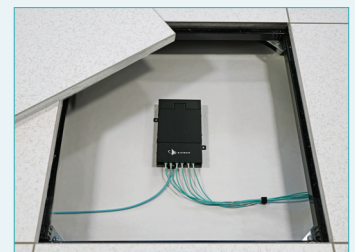

4. Simple Mounting

Mounts to any surface via four attachment holes.

Optional Splice Enclosure

Mounts below main enclosure for managing slack and protecting single or mass fusion splices.

Mounting Applications

Mounts easily in tight spaces (e.g., under raised floors) for distributing fiber in a variety of applications and environments.

Plug and Play

LightStack MTP to LC module (not included) accepts an MTP trunk cable at the rear for fast deployment and pathway space savings.
